

Urethane Casting Services

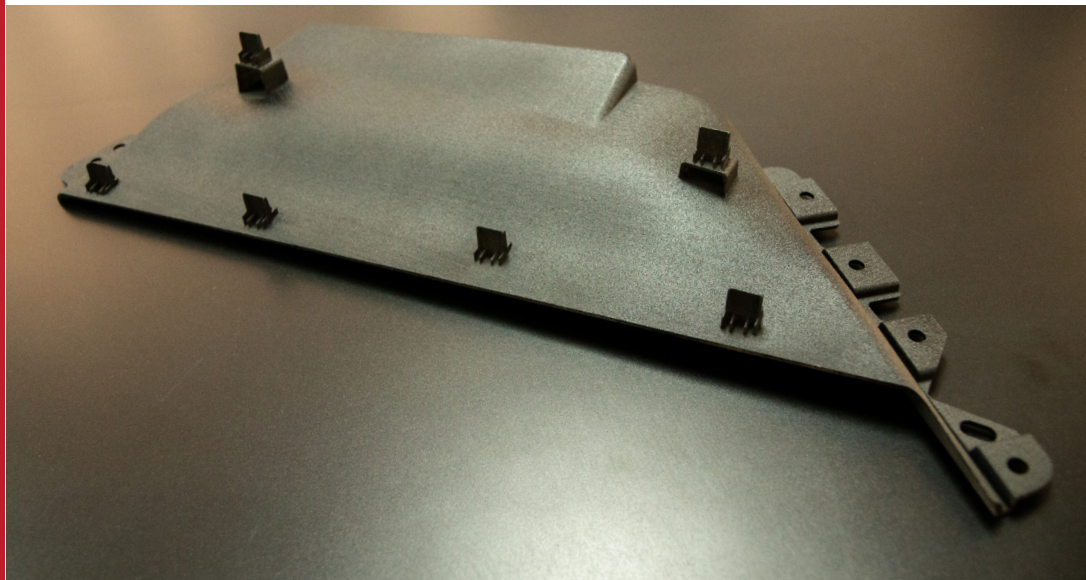

Ideal Technology Corporation provides leadership with innovative and technical services necessary in today's global tooling market. As a privately-held Michigan small business, Ideal Technology is dedicated to providing quality custom tooling, rapid prototyping / 3D printing, assembly equipment and fixtures to the Automotive and Aerospace industries. We are your Ideal tooling solution. You think it. We build it.

Ideal Technology produces urethane parts through silicone, epoxy and composite tooling.

Urethanes are great for short-run projects requiring similar look, feel and flex characteristics as injection-molded engineered plastics, without the high cost and long lead times of traditional prototype or production injection molding processes.

Features:

- Up to 50 parts per tool
- Flexible Shore A parts
- Shore D Urethanes for snap-fit/durability
- Rigid materials such as ABS-like & Polypropylene-like
- Parts in-hand in as little as 7-10 days
- EPDM Rubber-like parts
